

FALL ARRESTER BACK-UP

FALL ARRESTER

The **BACK-UP** is a fall arrester for a flexible anchor line developed for work at height fall protection systems.

Ideal for systems using a 10.5mm or 11mm EN1891 type A line.

Employing a toothless mechanism to reduce possible damage to the rope, this device is one of the least aggressive on the market for textile ropes .

Supplied with an OVALONE CARBON connector, it can even be used without a lanyard or energy absorber.

It features a selector lever that allows you to choose between two modes of use:

- ➔ free sliding along the rope in both directions
- ➔ upward sliding only, which allows the user to reduce the fall factor.

It may also be used as an ascender or as a rope clamp for rescue systems.

Also available in **BACK-UP ANSI** version.

Supplied with an OVALONE CARBON ANSI connector, this version also complies with ANSI Z359.15.

A special lanyard with fall indicator is also included in the package .

High quality, made in Italy!
